## Venue Recorder for Simultaneous Record of Multi-Resolution Uncompressed Video

The Venue Recorder application provides the ability to record multiple uncompressed video signals and multiple resolutions of video, audio, and ancillary data. Targeted for use with Venue Player or ClearView Analyzer systems when more than two sources need to be recorded, the Venue Recorder allows incoming content channels to be independent of system playback functions.

- Works with all Video Clarity system interfaces including ST 2110, SDI, and HDMI up to a system's capacity.
- Uses standard ClearView library function for uncompressed media.
- Provides remaining frames based on applied format.
- Record configuration is automatic with every input pattern selectable.
- Save all settings as a profiles for instant recall of multiple recording configurations.

The Venue Recorder application is available as a software license option to ClearView Analyzer, Venue Player, and RTM systems as a software option, model CVVR-1L.

## User Interface
